VYKON Enterprise Security 4.9

Dear VYKON partner,

The latest version of VYKON Enterprise Security has been released. With VYKON Enterprise Security, you can seamlessly integrate access control, identity, video surveillance, intrusion and visitor management systems with other building automation services such as lighting, HVAC and energy management all using powerful Niagara framework capabilities.

VYKON Enterprise Security features have been migrated from the AX platform to the Niagara 4.9 platform. These features include advanced threat-level management, integrated photo ID, LDAP database integration, and ISOM database API with Easy Lobby integration.

VYKON Enterprise Security licensing is consistent with the Niagara 4 licensing scheme. Just use the same JACE 8000 and Supervisor parts you use for building automation applications and add security licensing. VYKON Enterprise Security devices are excluded from global capacity licensing.

Download the [VYKON Enterprise Security Data Sheet](#) for more information.

We look forward to hearing from you. As always, thank you for your continued partnership.

ABOUT US

For almost 20 years, Tridium has led the world in business application frameworks — advancing truly open environments that harness the power of the Internet of Things. Our products allow diverse monitoring, control and automation systems to communicate and collaborate in buildings, data centers, manufacturing systems, smart cities and more. We create smarter, safer and more efficient enterprises and communities — bringing

intelligence and connectivity to the network edge and back.
